

Modernise Enterprise Applications

Build new skills to assess and prepare to move existing application workloads to the cloud during Azure Virtual Training Day: Modernise Enterprise Applications from Microsoft Learn. Join us for this free training event to explore best practices for application migration, tools to help your move and security approaches for cloud-hosted apps. You'll come away with an understanding of the principles and benefits of DevOps and ways to create more impact using monitoring solutions and integration Platform-as-a-Service (PaaS).

Note: Demo session will be on a .NET application and does not include a demo on other programming languages.

Who should attend:

- Solution architects
- Developers
- Infrastructure specialists
- IT Professionals

Technical level:

- This is an intermediate-level course. Attendees should be able to credibly discuss, offer perspective and integrate technology from minimal practical experience.

After completing this training, you will be able to:

- Identify best practices for modernising existing application workloads and migrating web applications to the cloud.
- Understand the value of prioritising your data security in the cloud.

- Explain the use cases and benefits of integration PaaS.

Here's what you can expect:

| Part 1 | Part 2 |
|---|---|
| Introduction | Introduction |
| Assessing your migration | Implementing security best practices |
| Break: 10 Minutes | Break: 10 Minutes |
| Moving application data to the cloud (database migrate) | Monitoring the health and performance of your web application |
| Break: 10 Minutes | Break: 10 Minutes |
| Move web applications to the cloud | Use cases and benefits of integration PaaS |
| Closing Questions & Answers | Closing Questions & Answers |
