

Contents

1 Introduction to EPM Cloud and Enterprise Profitability and Cost Management

- Objectives 1-2
- Introduction to Oracle EPM Cloud 1-3
- EPM Cloud Business Processes 1-4
- EPM Standard and Enterprise Cloud Services 1-6
- EPM Cloud Client Tools 1-7
- Data Exchange 1-8
- Accessing EPM Cloud Environments 1-9
- Profitability and Cost Management Business Process 1-10
- Enterprise Profitability and Cost Management: Overview 1-11
- Data Transformation Process 1-12
- Analysis Tools 1-13
- Implementation Steps 1-14
- Summary 1-16

2 Setting Up Enterprise Profitability and Cost Management

- Objectives 2-2
- Enterprise Profitability and Cost Management Applications 2-3
- Cubes: Overview 2-4
- Calculation and Reporting Cubes 2-5
- Custom Cubes 2-6
- Setting Up Your Instance 2-7
- Enterprise Profitability and Cost Management Landing Page 2-8
- Migrating from Profitability and Cost Management 2-9
- Creating an Application 2-10
- Calendar Frequency and Structure 2-11
- Multicurrency Applications 2-12
- Default Dimensions 2-13
- Starting the Application Creation Wizard 2-14
- Create Application: General 2-15
- Create Application: Details 2-16
- Create Application: Review 2-17
- Navigating Enterprise Profitability and Cost Management 2-18
- Application Cluster 2-19
- Modeling Cluster 2-20

Data Card and Data Forms 2-21
Reporting and Analysis 2-22
Tools Cluster 2-23
Academy Card 2-25
Navigator Menu 2-26
Managing Jobs 2-27
Summary 2-28

3 Aggregate Storage Dimensions

Objectives 3-2
Dimensions in ASO Cubes 3-3
Hierarchy Types 3-4
Stored Hierarchies 3-5
Dynamic Hierarchies 3-6
Multiple Hierarchies 3-7
Shared Members 3-8
Design Recommendations for ASO Hierarchies 3-9
Setting Dimension Hierarchy Type 3-10
Setting Hierarchy Type in Multiple Hierarchy Dimensions 3-11
Hierarchy-Based Calculations 3-12
Hierarchy Structure Calculations 3-13
Member Formulas 3-14
Implied Shares 3-15
Dimension Order and Evaluation Order 3-16
ASO Calculation Order 3-17
Solve Order 3-18
Solve Order: Example 3-20
Summary 3-21

4 Designing Dimensions for Enterprise Profitability and Cost Management

Objectives 4-2
Required Dimensions and Default Members 4-3
POV Dimensions 4-4
Years Dimension 4-5
Period Dimension: Calendar Frequencies 4-6
Period Dimension: Adding Period-to-Date Hierarchies 4-7
Scenario Dimension 4-8
Version Dimension 4-9
Account and Entity Dimensions 4-10
Rule and Balance Dimensions 4-11
Currency Dimension 4-12

- Design Best Practices for Application Scalability 4-13
- Dimension Count 4-14
- Dimension Member Count 4-15
- Attributes and UDAs 4-16
- Attributes and UDAs: Design Considerations 4-17
- Design Best Practices for Dimensions 4-18
- Selecting Dimension Hierarchy Types 4-19
- Managing Dimension Structure 4-20
- Dimension Structure Example: Stored Single Hierarchy 4-21
- Dimension Structure Example: Multiple Hierarchies 4-22
- Placeholder Dimensions 4-23
- View Dimensions 4-24
- Period-to-Date with View Dimensions 4-25
- Design Best Practices for Managing Data Scale 4-27
- BksML50: Overview 4-28
- Dimensions in BksML50 4-29
- Summary 4-30

5 Calculating Models: Overview

- Objectives 5-2
- Waterfall Data Transformation 5-3
- Models and Rules: Overview 5-4
- Model POVs 5-5
- Modeling Workflow 5-6
- Viewing Models and Rules 5-7
- Model Validation 5-8
- Calculating Models 5-9
- Viewing Job Progress and Status 5-10
- Review Calculation Processes 5-11
- Reviewing Calculations in Rule Balancing 5-12
- Summary 5-13

6 Managing Model POVs

- Objectives 6-2
- Creating Model POVs 6-3
- Editing Model POV Status 6-4
- Copying Model POVs 6-5
- Clearing Data from Model POVs 6-7
- Deleting Model POVs 6-8
- Summary 6-9

7 Managing Models and Rule Sets

- Objectives 7-2
- Creating Models 7-3
- Creating Models: Defining a Model 7-4
- Creating Models: Adding a Model Context 7-5
- Creating Rule Sets 7-6
- Defining a Rule Set 7-7
- Rule Set Calculation Options 7-8
- Iterative Rule Set: Example 7-9
- Adding a Rule Set Context 7-10
- How Model and Rule Set Context Work Together 7-11
- Creating Multiple Rule Sets 7-12
- System Dimensions and Calculations 7-13
- Balance Dimension Members and Calculations 7-14
- Rule Dimension Members 7-16
- System Calculation: Example 7-17
- Server-Based Calculation Settings 7-18
- Summary 7-20

8 Managing Rules

- Objectives 8-2
- Creating Allocation Rules 8-3
- Defining an Allocation Rule 8-4
- Defining the Allocation Source 8-5
- Defining the Allocation Source: Segmenting Calculations 8-6
- Defining the Allocation Destination 8-7
- Defining the Allocation Destination: Same As Source, Same Dimension 8-8
- Same As Source, Different Dimension: Use Case 1 8-9
- Same As Source, Different Dimension: Use Case 2 8-10
- Same As Source, Different Dimension: Member Matching Expressions 8-11
- Selecting Same As Source, Different Dimension 8-12
- Filtering Source and Destination Members 8-13
- Best Practices for Defining Allocation Sources and Destinations 8-15
- Selecting the Allocation Driver Location 8-16
- Selecting the Allocation Driver Location: Example (Part 1) 8-17
- Selecting the Allocation Driver Location: Example (Part 2) 8-18
- Selecting the Allocation Offset Location 8-19
- Alternate Offset Location Use Cases and Best Practices 8-20
- Alternate Offset Location: Example 8-21
- Validating the Allocation Rule Definition 8-22

- Creating Custom Calculation Rules 8-23
- Defining a Custom Calculation Rule 8-24
- Selecting the Result Dimension 8-25
- Selecting Target Dimension Members 8-26
- Adding a Calculation Formula 8-27
- Tips for Using NONEMPTYTUPLE Effectively 8-29
- Validating the Custom Calculation Rule Definition 8-31
- Creating Custom Calculations for Currency Conversion 8-32
- Bulk Operations for Rules 8-34
- Creating Multiple Rules 8-35
- Displaying Models and Rules on the Mass Edit Tab 8-36
- Adding and Replacing Members in Multiple Rules 8-37
- Enabling and Disabling Multiple Rules 8-38
- Copying Rules Between Rule Sets and Models 8-39
- Summary 8-40

9 Validating Models and Running Calculations

- Objectives 9-2
- Validating Models 9-3
- Validation Errors and Warnings 9-4
- Running Model Calculations for POVs 9-5
- Processing Range Options 9-6
- Processing Range Example: Start from Selected Rule 9-7
- Processing Range Example: End After Selected Rule 9-8
- Processing Range Example: Ruleset Range 9-9
- Processing Range Example: Single Rule 9-10
- Processing Options 9-11
- Running Multiple POV Calculations as a Batch 9-12
- Running Calculations Using EPM Automate 9-13
- Clearing Data from the Calculation Cube 9-14
- Clearing Data: Deleting or Renaming Rules 9-15
- Summary 9-17

10 Getting Started with Smart View

- Objectives 10-2
- Smart View: Introduction 10-3
- Downloading the Smart View Client and Extensions 10-4
- Installing the Smart View Client and Planning Admin Extension 10-5
- Smart View Ribbon and Panel 10-6
- Data Source Connections 10-7
- Investigating Data with Ad Hoc 10-8

Working with Forms and Dashboards in Excel 10-9
Managing Dimensions in Smart View 10-10
Summary 10-11

11 Managing and Troubleshooting Model Calculations

Objectives 11-2
Calculation Analysis: Overview 11-3
Calculation Details Panel 11-4
Model and Calculation Reports 11-6
Calculation Statistics Report 11-7
Calculation Statistics Report: Summary and Job Log 11-8
Calculation Statistics Report: Calculation Statistics 11-9
Troubleshooting Calculations by Using the Calculation Statistics Report 11-11
Comparing Calculation Runs 11-12
Calculation Statistics Comparison Report: Job Statistics 11-13
Calculation Statistics Comparison Report: Rule Statistics 11-14
Viewing Model Details 11-15
Comparing Models 11-16
Validating Rule Data 11-17
Capturing Calculation Diagnostics to Validate Rule Data 11-18
Providing Feedback for Troubleshooting Calculations 11-19
Submitting Service Requests for Calculation Issues 11-20
Rerunning POV Calculations 11-21
Creating Models from Snapshots 11-22
Verifying Calculation Results in Rule Balancing 11-23
Reading Rule Balancing Data 11-24
Viewing Rule Balancing Data in Smart View 11-26
Summary 11-27

12 Designing Rule Balancing, Profit Curves, and Allocation Traces

Objectives 12-2
Data Forms: Overview 12-3
Organizing Rule Balancing, Profit Curve, and Trace Forms 12-4
Rule Balancing and Data Forms 12-5
Viewing and Editing Forms from the Rule Balancing Page 12-6
Designing Forms for Rule Balancing 12-7
Profit Curves 12-9
Profit Curves: Details 12-10
Profit Curves: Category Analysis 12-11
Profit Curves: Data 12-12
Designing Forms for Profit Curves 12-13

- Creating Profit Curves 12-14
- Tracing Allocations 12-15
- Running a Trace 12-16
- Working with Trace Diagrams 12-17
- Viewing and Editing Forms from the Trace Page 12-18
- Designing Forms for Tracing Allocations 12-19
- Summary 12-20

13 Working with Dashboards, Infolets, and Reports

- Objectives 13-2
- Analyzing Data 13-3
- Dashboards 1.0 13-4
- Dashboards 2.0 13-5
- Infolets 13-6
- Reports 13-7
- Summary 13-8

14 Security in Enterprise Profitability and Cost Management

- Objectives 14-2
- Security Layers 14-3
- Single Sign-On 14-4
- Predefined Roles 14-5
- Access Control 14-6
- Assigning Application Roles 14-7
- Assigning Permissions 14-8
- Enabling and Disabling Security for Dimensions 14-9
- Assigning Security to Dimension Members 14-10
- Defining Cell-Level Security 14-11
- Summary 14-12

15 Data Integration for Enterprise Profitability and Cost Management

- Objectives 15-2
- Data Integration in Enterprise Profitability and Cost Management 15-3
- Data Maps and Smart Push 15-4
- Data Integration: Standard Workflow 15-5
- Data Integration: Quick Mode 15-6
- Application Data Export 15-7
- Common Integrations for Enterprise Profitability and Cost Management 15-8
- Required Configurations Before You Start 15-9
- Export Level 0 Data to an EPM Data File 15-10
- Creating an EPM Data File Target Application 15-11

- Creating a Quick Mode Integration to Export Data 15-12
- Running the Integration and Finding Export Results 15-13
- Exporting PCM_CLC Data to PCM_REP with Quick Mode: General 15-14
- Exporting PCM_CLC Data to PCM_REP with Quick Mode: Map Dimensions 15-15
- Exporting PCM_CLC Data to PCM_REP with Quick Mode: Options 15-16
- Export to Oracle ERP Cloud General Ledger 15-17
- Summary 15-18

16 Overview of Migrating from Profitability and Cost Management

- Objectives 16-2
- Comparing Application Types 16-3
- Comparison: Environment 16-4
- Comparison: Dimension Requirements 16-5
- Comparison: Rules and Modeling 16-6
- Migration Path 16-7
- What is migrated to Enterprise Profitability and Cost Management? 16-8
- What is not migrated to Enterprise Profitability and Cost Management? 16-9
- Migration Template 16-10
- Generating and Downloading the Migration Template 16-11
- Migration Template Sections 16-12
- Migrate to EPCM Page in Profitability and Cost Management 16-13
- Repeating Migrations 16-15
- Post-Migration Tasks in Enterprise Profitability and Cost Management 16-16
- Summary 16-17
