# Contents

## **1 Introduction**

- Agenda 1-2
- Course Goals 1-3
- Course Agenda: Day 1 1-4
- Course Agenda: Day 2 1-5
- Course Agenda: Day 3 1-6
- Course Agenda: Day 4 1-7
- Course Agenda: Day 5 1-8
- Introductions 1-9
- Your Learning Center 1-10
- Your Lab Environment 1-11

## **2 Managing Services and Service Properties by Using SMF**

- Objectives 2-2
- Job Workflow 2-3
- Agenda 2-4
- Importance of Service Configuration 2-5
- Advanced Features of SMF 2-6
- SMF Profiles 2-7
- SMF Profile: Example 2-8
- When SMF Profiles Are Applied 2-9
- SMF Manifests 2-10
- SMF Manifest: Example 2-12
- Service Configuration Repository 2-16
- SMF Administrative Layers 2-18
- SMF Repository Backups 2-20
- SMF Repository Snapshots 2-21
- Implementing Service Administration 2-22
- Quiz 2-23
- Agenda 2-27
- Configuring SMF Services 2-28
- Creating New Service Scripts 2-29
- Creating a Service 2-30
- Creating a Service: Example 2-31
- Modifying a Service's Manifest 2-36
- Modifying a Service's Manifest: Example 2-37

- Changing an Environment Variable for a Service 2-38
- Changing an Environment Variable for a Service: Example 2-39
- Changing a Property for an inetd-Controlled Service 2-40
- Changing a Property for an inetd-Controlled Service: Example 2-41
- Creating and Applying an SMF Profile 2-44
- Creating and Applying an SMF Profile: Example 2-46
- Changing Services and Their Configurations by Using the netsservices Command 2-47
- Modifying a Property Value of an SMF Service 2-48
- Modifying a Property Value of an SMF Service: Example 2-49
- Quiz 2-50
- Practice 2-1 and Practice 2-2 Overview: Configuring SMF Services and Working with Service Profiles 2-52
- Agenda 2-53
- Troubleshooting SMF Services 2-54
- Debugging a Service That Is Not Starting 2-55
- Debugging a Service That Is Not Starting: Example 2-56
- Restoring a Service That Is in Maintenance State 2-57
- Restoring a Service That Is in Maintenance State: Example 2-58
- Reverting to an SMF Snapshot 2-59
- Reverting to an SMF Snapshot: Example 2-60
- Configuration Repository Failed Integrity Check Process 2-61
- Repairing a Corrupt Repository 2-62
- Repairing a Corrupt Repository: Example 2-65
- Debugging the Services During a System Boot 2-67
- Addressing system/filesystem/local:default Service Failures During a Boot 2-68
- Practice 2-3 Overview: Restoring and Recovering a Service 2-69
- Summary 2-70

### **3 Managing Software Packages by Using IPS**

- Objectives 3-2
- Job Workflow 3-3
- Agenda 3-4
- IPS: Overview 3-5
- IPS Components 3-7
- Agenda 3-9
- Identifying IPS Server System Requirements 3-10
- Local IPS Repository 3-11
- Creating a Local IPS Repository 3-12
- Copying an IPS Repository from zip Files 3-13
- Copying an IPS Repository from an iso File 3-15

Copying an IPS Repository from the Internet	3-17
Automatically Copying an IPS Repository from the Internet	3-19
Providing Access to Your Local IPS Repository	3-20
Enabling Users to Retrieve Packages by Using a File Interface	3-21
Enabling Users to Retrieve Packages by Using an HTTP Interface	3-23
Configuring a Local IPS Package Repository: Example	3-25
Creating a ZFS File System to Hold the Repository	3-26
Obtaining Software Packages from the Oracle Solaris Download Site	3-27
Configuring the Repository Server Service	3-30
Starting the Repository Service	3-31
Setting the Local IPS Publisher	3-32
Testing IPS on the Local Server	3-33
Maintaining Multiple Identical Local Repositories	3-34
Quiz	3-35
Summary	3-36
Practice 3-1 Overview: Configuring a Local IPS Package Repository	3-37

#### **4 Managing Data Backup and Restore by Using ZFS**

Objectives	4-2
Job Workflow	4-3
Agenda	4-4
Planning for Data Storage Configuration and Backup	4-5
Identifying Data Backup and Restore Requirements	4-6
Determining Storage Pool Requirements	4-7
Identifying Replication Features of a ZFS Storage Pool	4-8
Mirrored Storage Pool Configuration	4-10
RAID-Z Storage Pool Configuration	4-11
Self-Healing Data	4-12
Dynamic Striping	4-13
Dynamic Striping in a Mirrored Pool	4-14
Recommended Storage Pool Practices	4-15
Determining File System Requirements	4-17
Identifying Your Data Backup and Restore Strategy	4-18
Determining Ways to Save Data Storage Space	4-19
Implementing the Data Storage Configuration and Backup Plan	4-20
Quiz	4-21
Agenda	4-26
Managing Data Redundancy with Mirrored Storage Pools	4-27
Creating a Mirrored Storage Pool	4-28
Adding Log Devices to a Storage Pool	4-29
Adding Cache Devices to a Storage Pool	4-30

Managing Devices in ZFS Storage Pools 4-31

- Adding Devices to a Storage Pool 4-32
- Attaching Devices to a Storage Pool 4-33
- Taking Devices Offline in a Storage Pool 4-35
- Detaching Devices from a Storage Pool 4-36
- Bringing Devices Online in a Storage Pool 4-37
- Replacing Devices in a Storage Pool 4-38
- Designating Hot Spares in a Storage Pool 4-39
- Removing Hot Spares in a Storage Pool 4-43

Practice 4-1 Overview: Managing Data Redundancy with a ZFS Mirrored Pool 4-44

Agenda 4-45

Backing Up and Recovering Data with ZFS Snapshots 4-46

- Creating and Destroying a ZFS Snapshot 4-47
- Displaying a ZFS Snapshot 4-48
- Identifying ZFS Snapshot Differences 4-49
- Identifying ZFS Snapshot Differences: Example 4-50
- Sending ZFS Snapshot Data 4-51
- Receiving ZFS Snapshot Data 4-54
- Remote Replication of ZFS Snapshot Data 4-57

Practice 4-2 Overview: Using ZFS Snapshots for Backup and Recovery 4-58

Agenda 4-59

Managing Data Storage Space with ZFS File System Properties 4-60

- Overriding Default ZFS Mount Points 4-61
- mountpoint Property 4-62
- Automatic Mount Point Behavior 4-63
- Legacy Mount Point Behavior 4-64
- Managing Legacy Mount Points 4-65
- share.nfs Property: Introduction 4-66
- Setting the share.nfs Property 4-67
- Unsharing ZFS File Systems 4-68
- Sharing ZFS File Systems 4-69
- Setting ZFS Quotas and Reservations 4-70
- quota, reservation, refquota, refreservation, and used Properties 4-71
- Setting Quotas for ZFS File Systems 4-72
- Setting a User Quota on a ZFS File System 4-74
- Setting a Group Quota on ZFS File System 4-75
- Setting Default User and Group Quotas 4-76
- Displaying User and Group Space Usage 4-78
- Identifying User and Group Space Usage 4-79
- Removing User and Group Quotas 4-80
- Identifying Reservation Restrictions 4-81

Setting Space Reservations on Datasets and Snapshots	4-82
Setting a Space Reservation on a Dataset	4-83
Displaying Reservation Values	4-84
Quiz	4-85
Practice 4-3 Overview: Configuring ZFS Properties	4-86
Agenda	4-87
Troubleshooting ZFS Failures	4-88
Identifying Problems in ZFS	4-89
Troubleshooting in ZFS: Overview	4-90
Basic Recovery Process	4-91
Configuring syslog for FMD Messages	4-92
Determining Problems in a ZFS Storage Pool	4-93
Interpreting zpool status Output	4-94
Determining Problems in a ZFS Storage Pool	4-97
Repairing a Damaged ZFS Configuration	4-98
Repairing a Missing Device	4-99
Reattaching a Device	4-101
Repairing a Missing Device	4-102
Repairing a Damaged Device	4-103
Determining the Cause of Device Failure	4-104
Clearing Transient Errors	4-107
Replacing a Device in a ZFS Storage Pool	4-108
Viewing Resilvering Status	4-110
Scrubbing	4-111
Repairing Damaged Data	4-112
Data Corruption: Overview	4-113
Identifying the Type of Data Corruption	4-114
Repairing a Corrupted File or Directory	4-116
Repairing Damage to a ZFS Storage Pool	4-117
Practice 4-4 Overview: Troubleshooting ZFS Failures	4-118
Summary	4-119

## **5 Configuring the Network**

Objectives	5-2
Job Workflow	5-3
Agenda	5-4
Elastic Virtual Switch: Overview	5-5
Benefits of Using the EVS Feature	5-7
EVS Components	5-8
EVS: Example	5-10
EVS Administrative Commands	5-11

Planning an EVS Configuration	5-12
Installing the Mandatory EVS Packages	5-14
Setting Up SSH Authentication	5-15
Configuring an EVS Controller	5-18
Configuring an EVS	5-20
Creating VNICs for an Elastic Virtual Switch	5-21
EVS and Zones	5-22
Creating a VNIC anet Resource or an EVS	5-25
Quiz	5-26
Practice 5-1 Overview: (Demonstration) Configuring EVS	5-28
Agenda	5-29
Importance of Network High Availability	5-30
What Does 99.99% Mean?	5-31
High Availability: Overview	5-32
Link Aggregation: Overview	5-34
Link Aggregation Types	5-36
Aggregation Modes and Switches	5-38
Load Balancing and Aggregation Policies	5-39
Commands to Administer Link Aggregation	5-40
Preparing for Link Aggregation	5-41
Creating Link Aggregation	5-42
Modifying Link Aggregation	5-43
Deleting Link Aggregation	5-44
Creating a DLMP Aggregation	5-45
Quiz	5-46
Practice 5-2 Overview: Configuring a Link Aggregation	5-47
Agenda	5-48
IPMP: Introduction	5-49
IPMP Components	5-51
Comparing Link Aggregation and IPMP	5-53
Failure and Repair Detection in IPMP	5-54
IPMP Configurations	5-55
How IPMP Works: Active-Active	5-56
How IPMP Works: Active-Standby	5-60
Configuring an IPMP Group	5-65
Creating an IPMP Group	5-66
Adding IP Addresses to an IPMP Group	5-67
Moving an Interface from One IPMP Group to Another Group	5-68
Deleting and Disabling an IPMP Group	5-69
Implementing Link Failover by Using IPMP	5-70
Configuring an Active-Active IPMP Group	5-71

- Assigning Test Addresses 5-72
- Configuring an Active-Standby IPMP Group 5-73
- Monitoring an IPMP Group 5-74
- Displaying IPMP Group Information 5-75
- Obtaining IPMP Address Information 5-76
- Verifying IPMP Interface Information 5-77
- Obtaining Probe Target Information 5-78
- Checking Probe Information 5-79
- Quiz 5-80
- Practice 5-3 Overview: Configuring IPMP 5-84
- Agenda 5-85
- Need for a Firewall 5-86
- Packet Filter: Overview 5-87
- Comparison of IP Filter and PF 5-88
- Behavior of PF Firewall 5-89
- PF Rules 5-90
- Packet Flow in the PF Firewall 5-91
- Configuring PF Firewall 5-92
- Monitoring PF Firewall 5-93
- Summary 5-95

## **6 Administering Network Services**

- Objectives 6-2
- Job Workflow 6-3
- Agenda 6-4
- Importance of Network Services 6-5
- Configuring Network Services 6-6
- Network File System: Overview 6-8
- Configuring NFS 6-10
- Configuring the NFS Server 6-11
- Checking the NFS Services Status 6-12
- Configuring the NFS Client 6-13
- Selecting a Different Version of NFS on a Server 6-14
- Enabling the Automount 6-15
- Displaying NFS Server and Client Statistics 6-17
- Practice 6-1 Overview: Configuring the NFS 6-18
- Agenda 6-19
- Domain Name System: Overview 6-20
- How DNS Works 6-21
- DNS Name Resolution 6-22
- Name Resolution Process 6-23

Checking the Connection to the DNS Server 6-25  
Practice 6-2 Overview: Configuring a DNS Client 6-26  
Agenda 6-27  
Lightweight Directory Access Protocol: Overview 6-28  
Preparing for LDAP Client Setup 6-30  
LDAP and the SMF 6-31  
How LDAP Works 6-32  
Practice 6-3 Overview: Configuring an LDAP Client 6-33  
Summary 6-34

## **7 Advanced Administration of Zones**

Objectives 7-2  
Workflow Orientation 7-3  
Agenda 7-4  
Oracle Solaris Zones 7-5  
Oracle Solaris Zone Brands 7-6  
Oracle Solaris 11 Zones: Features 7-7  
Agenda 7-11  
Importance of Resource Management 7-12  
Zone Resource Management 7-13  
Managing System Resource Allocation to a Zone 7-15  
Resource Pool Allocation 7-17  
How Resource Pools Work 7-18  
Memory Resource Capping 7-19  
Specifying Resource Capping Within a Zone 7-20  
Allocating System Resources to a Zone 7-21  
Live Zone Reconfiguration 7-22  
Determining a Zone's Resource Utilization 7-24  
Determining a Zone's Kernel File System Statistics 7-26  
Allocating and Managing System Resources in a Zone 7-27  
Allocating and Managing CPU Resources with Resource Pools 7-28  
Enabling Services for Resource Pools 7-29  
Configuring a Persistent Resource Pool 7-30  
Displaying the Resource Pool Configuration File 7-31  
Modifying the Resource Pool Configuration File 7-33  
Displaying and Committing the Modified Resource Pool Configuration File 7-35  
Displaying the Resource Pool Configuration That Is Currently in Use 7-38  
Displaying All Active Resource Pools 7-39  
Binding the Zone to a Persistent Resource Pool 7-41  
Listing the Current State of the Zones 7-42  
Allocating the Pool to the Zone and Confirming the Allocation 7-43

Confirming the Availability of the Resource Pool 7-44  
Removing the Resource Pool Configuration 7-46  
Removing the Pool Configuration from the Zone 7-47  
Rebooting the Zone 7-48  
Checking the Resource Pool Configuration for the Zone 7-49  
Deleting the Resource Pool 7-51  
Displaying All Active Resource Pools 7-52  
Allocating and Managing Physical Memory Resources with Resource Capping 7-53  
Quiz 7-54  
Practice 7-1 Overview: Allocating Resources to Zones 7-56  
Agenda 7-57  
Migrating Oracle Solaris 10 Systems 7-58  
Migrating Oracle Solaris 10 Zones 7-59  
Migrating Oracle Solaris 10 Global Zones 7-61  
Practice 7-2: Overview 7-63  
Agenda 7-64  
Kernel Zones Overview 7-65  
Why Kernel Zones? 7-66  
Capabilities of Kernel Zones 7-67  
System Requirements for Using Oracle Solaris Kernel Zones 7-68  
Auxiliary States 7-70  
Configuring Kernel Zones 7-71  
Host Data and Host ID 7-76  
Boot Loader 7-78  
Cloning a Kernel Zone 7-80  
Cloning by Using zoneadm clone 7-81  
Cloning by Using Unified Archives 7-82  
Suspending and Resuming a Kernel Zone 7-83  
Warm Migrating a Kernel Zone 7-84  
Quiz 7-86  
Practice 7-3 Overview: Configuring Kernel Zones (Demonstration) 7-88  
Agenda 7-89  
Archival Before Oracle Solaris 11 7-90  
Oracle Solaris Unified Archives Overview 7-91  
Key Terms 7-94  
Unified Archives Types 7-95  
Platform Portability 7-96  
Unified Archives Creation 7-97  
Creating a Clone Archive 7-98  
Creating a Recovery Clone 7-99  
Deploying Unified Archives 7-100

Deploying a Zone from Unified Archives by Using Zones Utilities 7-101  
Deploying an Archive Using AI 7-102  
Deploying a System from Unified Archives by Using AI 7-103  
Deploying an Archive Using Bootable Media 7-104  
Troubleshooting Cloning and Archiving 7-105  
Practice 7-4 Overview: Working with Unified Archives (Demonstration) 7-106  
Summary 7-107

## **8 Securing the Oracle Solaris 11 OS**

Objectives 8-2  
Workflow Orientation 8-3  
Agenda 8-4  
Importance of Assigning User Privileges and Roles 8-5  
Process Rights Management and Privileges 8-6  
Privilege Descriptions 8-7  
Implementing Privileges 8-8  
User Rights Management 8-10  
Roles 8-11  
Rights Profile 8-12  
Basic Solaris User Rights Profile 8-13  
Interpreting the /etc/security/policy.conf File 8-14  
Authorizations and Privileges 8-15  
Security Attributes 8-16  
Key Rights Databases 8-17  
Interpreting the user\_attr Database 8-18  
Interpreting the auth\_attr Database 8-19  
Interpreting the exec\_attr Database 8-21  
Interpreting the prof\_attr Database 8-23  
Relationships Among the Four Rights Databases 8-25  
Profile Shells 8-27  
Implementing the User Privileges and Roles Plan 8-28  
Quiz 8-29  
Agenda 8-33  
Configuring and Managing Privileges 8-34  
Examining Process Privileges 8-35  
Determining the Privileges Available to the Shell 8-36  
Determining the Process Privileges Available to a Shell 8-38  
Determining the Privileges Available to a Process 8-39  
Displaying the Description of a Privilege 8-40  
Managing User Privileges 8-41  
Determining the Privileges Directly Assigned to You 8-42

Determining the Privileged Commands That You Can Use 8-43  
Assigning Privileges to a User or Role 8-44  
Limiting Privileges of a User or Role 8-45  
Determining Privileges Needed by a Program by Using the ppriv  
Debugging Command 8-46  
Using the ppriv Debugging Command to Examine Privilege Use in a Profile  
Shell 8-47  
Using the truss Command to Examine Privilege Use in a Regular Shell 8-48  
Practice 8-1 Overview: Delegating Privileges to Users and Processes 8-49  
Agenda 8-50  
Configuring and Using Role-Based Access Control RBAC 8-51  
Creating a Role 8-52  
Creating a Rights Profile 8-54  
Creating a Rights Profile: Example 8-55  
Cloning and Modifying a Rights Profile 8-56  
Cloning and Modifying a Rights Profile: Example 8-57  
Assigning a Rights Profile to a Role 8-58  
Assigning a Role to a User 8-59  
Assigning a Role to a User: Example 8-60  
Assuming a Role 8-61  
Restricting the Superuser 8-62  
Restricting an Administrator to Explicitly Assigned Rights 8-63  
Assigning the Rights Profile to a User 8-64  
Delegating an Authorization to a User 8-65  
Delegating an Authorization to a User: Example 8-66  
Assigning Authorization to a Role 8-67  
Modifying a Systemwide RBAC Policy 8-68  
Practice 8-2 and Practice 8-3: Overview 8-69  
Agenda 8-70  
BART: Overview 8-71  
BART: Example 8-72  
Practice 8: Overview 8-74  
Agenda 8-75  
Auditing in Oracle Solaris 8-76  
Oracle Solaris 11 Auditing Features 8-78  
Default Configuration of the Audit Service 8-80  
Displaying Audit Service Defaults 8-81  
Enabling and Disabling the Audit Service 8-83  
Viewing Contents of Binary Audit Files 8-84  
Agenda 8-85  
Compliance in Oracle Solaris OS 8-86

Solaris Security Policy Benchmark 8-87  
PCI DSS Security Policy Benchmark 8-88  
Assessing the Security Compliance of an Oracle Solaris System 8-89  
Tailorings for Security Benchmarks 8-91  
Creating Tailorings for Security Benchmarks 8-92  
Quiz 8-95  
Practice 8: Overview 8-96  
Summary 8-97

## **9 Managing Processes and Priorities**

Objectives 9-2  
Job Workflow 9-3  
Agenda 9-4  
Importance of Process Execution in an Appropriate Scheduling Class 9-5  
Process Scheduler 9-6  
Process Priority 9-7  
Process Scheduling Classes 9-8  
Priority Ranges for Scheduling Classes 9-9  
Combining FSS with Other Scheduling Classes 9-10  
Using CPU Shares with the FSS 9-12  
Scheduling Class on a System with Zones Installed 9-14  
Implementing the Process Execution in an Appropriate Scheduling Class 9-15  
Quiz 9-16  
Agenda 9-20  
Managing Process Scheduling Priority 9-21  
Displaying Processes by Using the top Command 9-22  
Displaying Process Class Information 9-24  
Determining the Global Priority of a Process 9-25  
Designating a Process Priority 9-27  
Modifying a Process Priority 9-29  
Agenda 9-30  
Configuring the Fair Share Scheduler (FSS) 9-31  
Making FSS the Default Scheduling Class 9-32  
Manually Moving the init Process into the FSS Class 9-33  
Manually Moving Processes from Other Classes into the FSS Class 9-34  
Manually Moving a Project's Processes into the FSS Class 9-36  
Changing Scheduler Parameters 9-37  
Practice 9-1 Overview: Modifying Process Scheduling Priority 9-38  
Agenda 9-39  
Managing the Scheduling Class of Zones 9-40  
Assigning CPU Shares to the Global Zone 9-41

Configuring CPU Shares Configuration in a Nonglobal Zone	9-42
Configuring CPU Shares in a Nonglobal Zone: Example	9-43
Measuring CPU Performance in the Zones	9-44
Removing the CPU Shares Configuration from a Zone	9-45
Removing the CPU Shares Configuration from a Zone: Example	9-46
Practice 9-2 Overview: Configuring the FSS in an Oracle Solaris Zone	9-47
Summary	9-48

## **10 Installing Oracle Solaris 11 on Multiple Hosts**

Objectives	10-2
Job Workflow	10-3
Agenda	10-4
Advantages of Using the Automated Installer	10-5
Automated Installation: Overview	10-6
AI Environmental Requirements	10-8
Automated Installation Process	10-10
How the AI Works	10-11
AI SMF Service	10-12
AI Manifest	10-13
Identifying the Types of AI Manifests	10-14
default.xml File	10-15
Criteria Manifest	10-16
Criteria Manifest: Examples	10-18
System Configuration Profiles	10-19
SC Profile: Example	10-20
AI Use Case: Using Default Manifest	10-22
AI Use Case: Using Custom Manifest	10-24
AI Use Case: Using an SC Profile	10-26
AI Use Case: Multiple AI Services	10-27
Quiz	10-28
Agenda	10-29
Reviewing AI Install Server Requirements	10-30
Verifying AI Install Server Software Requirements	10-31
Verifying the Static IP Address	10-32
Verifying That DNS is Operational	10-33
Verifying That IPS is Available Locally	10-34
Practice 10-1 Overview: Verifying System AI Requirements (Optional)	10-35
Configuring the AI Install Server	10-36
Enabling the DNS Multicast Service	10-37
Installing the AI Installation Tools	10-38
Setting Up the AI Boot Image	10-40

Configuring an AI Installation Service 10-41  
Verifying the netmasks File Configuration 10-42  
Creating an AI Installation Service with an ISC DHCP Server Setup 10-43  
Creating an AI Installation Service Without a DHCP Setup 10-46  
Adding a Client to the AI Installation Service 10-47  
Adding an SC Profile to an Installation Service 10-48  
Creating a Custom AI Manifest 10-49  
Selecting the AI Manifest 10-51  
Adding Installation Criteria to an AI Manifest 10-53  
Introducing the Automated Installer CLI Manifest Editor 10-54  
Installing and Configuring Zones by Using AI 10-55  
How AI Installs Nonglobal Zones 10-56  
Specifying Nonglobal Zones in the Global Zone AI Manifest 10-57  
Nonglobal Zone Configuration and Installation Data 10-58  
Practice 10-2 Overview: Configuring the AI Server 10-59  
Agenda 10-60  
How a Client Is Installed 10-61  
Configuring the Client System 10-62  
Identifying Client System Requirements 10-63  
Using Secure Shell to Remotely Monitor an Installation 10-64  
Implementing the Configuration 10-65  
Reviewing Client Installation Messages 10-66  
Practice 10-3, Practice 10-4, Practice 10-5, and Practice 10-6: Overview 10-68  
Agenda 10-69  
Distribution Constructor: Introduction 10-70  
Identifying System Requirements for Using the Distribution Constructor 10-71  
Using Distribution Constructor Manifest Files 10-72  
Image Creation Process 10-73  
Creating a Custom Image 10-75  
Building an Image 10-76  
Quiz 10-77  
Summary 10-80

## **11 Implementing System Messaging and Diagnostic Facilities**

Objectives 11-2  
Job Workflow 11-3  
Agenda 11-4  
Importance of Implementing System Messaging and Diagnostic Facilities 11-5  
Monitoring System Logs 11-6  
syslogd Daemon 11-7  
/etc/syslog.conf File 11-8

Interpreting the /etc/syslog.conf File Selector facility Field 11-9  
Interpreting the /etc/syslog.conf File Selector level Field 11-11  
Interpreting the /etc/syslog.conf File Action Field 11-12  
Monitoring a syslog File in Real Time 11-13  
Interpreting System Messages 11-14  
Configuring the /etc/syslog.conf File 11-16  
Stopping and Starting the syslogd Daemon 11-18  
logger Command 11-19  
Agenda 11-21  
Configuring System Messaging 11-22  
TCP Tracing 11-23  
Logging a Message by Using TCP Trace 11-24  
Setting Up Message Routing 11-25  
Setting Up Message Routing: Example 11-26  
Monitoring a syslog File in Real Time 11-27  
Practice 11: Overview 11-28  
Agenda 11-29  
Configuring System Crash Facilities 11-30  
Crash Dump Process: Overview 11-31  
How and Where Crash Dump Files Are Saved 11-32  
/etc/dumpadm.conf File 11-34  
Displaying the Current Crash Dump Configuration 11-36  
Modifying the Crash Dump Configuration 11-37  
Saving the Crash Dump File 11-39  
Uncompressing the Crash Dump File 11-40  
Displaying the Crash Dump File Contents 11-41  
Displaying the Crash Dump File Contents: Example 11-42  
Quiz 11-43  
Agenda 11-44  
Configuring Dump Facilities for Business Application Failure 11-45  
Core Dump Process: Overview 11-46  
How and Where Core Dump Files Are Saved 11-47  
Core Dump: Example 11-48  
What Is a Core File? 11-49  
Core File Generation: Advantages and Disadvantages 11-50  
Core File Paths 11-51  
Displaying the Current Core Dump Configuration 11-52  
Modifying the Core Dump Configuration 11-53  
Setting a Core File Name Pattern 11-55  
Enabling a Core File Path 11-56  
Displaying the Contents of the Core Dump File 11-57

Displaying the Core Dump File Contents: Example 11-58  
Quiz 11-59  
Practice 11-7 Overview: Configuring System and Application Crash Facilities 11-68  
Agenda 11-69  
DTrace: Overview 11-70  
DTrace: Capabilities 11-71  
DTrace: Components 11-72  
Probes 11-73  
Providers 11-74  
Consumers 11-75  
D Language 11-76  
DTrace Toolkit 11-77  
DTrace Toolkit: Important Scripts 11-78  
Before Using DTrace 11-79  
Launching DTrace 11-80  
DTrace: Example 11-81  
Summary 11-82

## **12 Introducing Oracle Solaris 11 on the Cloud**

Lesson Objectives 12-2  
Agenda 12-3  
Compute Cloud Service 12-4  
IaaS Compute Cloud Service 12-5  
Five Oracle Journeys to the Public Cloud 12-6  
What is Oracle Compute Cloud Service? 12-7  
Oracle Compute Cloud Service 12-8  
Features of Oracle Compute Cloud Service 12-9  
Oracle Compute Cloud Service Terminology 12-11  
Agenda 12-13  
Subscribing to Oracle Compute Cloud Service 12-14  
Agenda 12-16  
About Oracle-Provided Solaris Images on the Cloud 12-17  
What is an Instance? 12-18  
Workflow for Creating Your First Oracle Solaris 11.3 Instance on the Cloud 12-19  
Create Instance Wizard 12-20  
View Oracle Solaris Instance Status 12-21  
Agenda 12-22  
Creating an SSH-enabled User on an Oracle Solaris Instance 12-23  
Workflow for Creating an SSH-Enabled User on an Oracle Solaris Instance 12-24  
Agenda 12-25  
What Is an Orchestration? 12-26

What Does an Orchestration Look Like?	12-27
Which Objects Can I Create and How Can I Use them in My Orchestration?	12-28
Creating an Instance Using Orchestration	12-29
Refer to Oracle Cloud Computing Resources	12-30
Summary	12-31
