

IBM App Connect Enterprise 12 Application Development III

OEM: IBM • Duration: 2 Days (16 hrs) • Code: WM688G

COURSE MODULES & TOPICS

Objectives

- Develop a message flow that implements aggregation to fan-out information into a single output message.
- Configure integration nodes and integration servers to connect to secured resources by using credentials that are stored in encrypted form in an IBM App Connect Enterprise vault
- Configure an IBM App Connect vault for storing encrypted credentials, which can be used to access secured resources
- Enable user trace and retrieve the collected trace data
- Build a message flow that uses IBM App Connect Enterprise web user interface to view events and replay messages
- Create monitoring events on selected nodes so that they could be published to a topic and recorded into a database table
- Construct and configure a business transaction definition in the web user interface
- Create the business events that make up a business transaction definition
- Design an application that uses the Business Transaction Monitoring dashboard to view events in completed, failed, inconsistent, and in-progress states
- Create and add user-defined properties to a message flow
- Assemble promoted properties to provide common values for multiple message flow nodes in the flow by converging promoted properties

Exercises

- Exercise 1. Implementing message flow aggregation
- Exercise 2. Securing a message flow that uses the vault
- Exercise 3. Debugging a message flow
- Exercise 4. Implementing error handling in a message flow
- Exercise 5. Creating a reusable pattern
- Exercise 6. Record and replaying message flow data
- Exercise 7. Monitoring business transactions across multiple message flows
- Exercise 8. Preparing for production by creating a runtime-aware message flow
