

Application Integration on Oracle Cloud – (Volume I)

Course Duration: 32 Hours

Table of Contents

Become An Application Integration Professional

For whom is this training intended?

Learning Path

Measuring Your Progress

Learning Path

Get the Answers You Need

Ratings and Feedback

Learning Path

Get the Most Out of This Course

Let's get started!

Module 1: Introduction to OIC

OIC Overview

Oracle Integration 3

Process Automation

Visual Builder

File Server

B2B

Integrations

Integrations

Oracle Integration 3 Editions

Oracle Integration 3

Process Automation Overview

Integrations Feature Overview

Defining OIC Terminology

Integrations Feature

Integrations Feature Use Cases

Integration Patterns

Use Cases

Application-to-Application Integration

Automating Business Workflows

Real-time Data Synchronization

Extending Applications

Legacy Systems Integration

- Unified Support Ticketing System
- Data Migration
- IoT Integration
- Integrating Oracle Applications
 - Why Integration Still Matters
 - Built-in Integration Frameworks
 - Two Paths to Integration
 - Prebuilt Integrations: Start Faster
 - OIC Capabilities for Oracle Cloud Apps
 - Organizing with OIC Projects
 - To wrap up...
- Elements of an Integration
 - Integration Flow
- Understanding OIC Service Roles
 - OIC Service Roles
- Using Integration Projects
 - About Projects
 - Adding a New Project
 - Determine Project RBAC Permissions
 - Project Views
 - Project Sections
 - Reasons to use Projects
- Demo: Using Projects
- Getting Started With Integrations
 - Integration Development Workflow
 - Example Use Case

Module 2: Adapters & Connections

- Understanding Adapters & Connections
 - Review: What is an OIC Integration?
 - What is an OIC Adapter?
 - Design-Time Adapter Configuration Wizard
 - OIC Adapters
 - To wrap up...
- Creating Connections
 - Creating vs. Configuring a Connection
 - Creating Additional Connections
 - You Don't Always Start from Scratch
 - Creating a Connection Workflow
 - Select an Adapter

- Creating a Connection Workflow
 - Provide Basic Information
 - Creating a Connection Workflow
 - Adapter Examples
- Demo: Connection Sharing Between Projects
 - Connection Sharing Between Projects
- Connection & Security Properties
 - Connection & Security Properties - Part One
 - Connection & Security Properties - Part Two
- Defining SOAP Adapter Connections
 - Defining SOAP Adapter Connections - Part One
 - Defining SOAP Adapter Connections - Part Two
- Defining REST Adapter Connections
 - Use Cases
 - REST Adapter Invoke Connections
 - Defining Connections
 - REST Adapter Trigger Connections
 - Defining Connections
- Connecting to Private Resources
 - Accessing Private Resources
 - Connecting to Endpoints Located in a Private OCI VCN Subnet
 - Private Endpoint Adapter Support
 - Configuring a Private Endpoint for an OIC Instance
 - Connecting to Endpoints Located in a Private OCI VCN Subnet
 - Connecting to Endpoints Located in any Private Cloud
 - Connecting to Endpoints Located On-Premises
 - Connectivity Agent Adapter Support
 - Differences between a Private Endpoint and Connectivity Agents
- Connectivity Agent Architecture
 - Public Internet Pattern
 - FastConnectPublic Peering Pattern
 - Private Peering Pattern
 - Agent Deployment
 - Agent Runtime Behavior
 - Scenario 1: Your databases/applications are running on-prem behind a firewall
 - Scenario 2: Your databases/applications are running on the cloud
 - Scenario 3: Configuring Agents for High Availability (HA)
 - Scenario 4: Configuring HA Agents for HA Application/Database

Module 3: Configuring Connections

Database Trigger Configuration

- Database Trigger Adapter Role Concepts

- Supported Database Systems

- Trigger Configuration

- Supported Database Systems

REST Trigger Configuration

- Use Cases

- Trigger Connection Options

- Multiple Operations

- Trigger Connection Options

Demo: REST Trigger Configuration

Demo: SOAP Trigger Configuration

- Defining Connections

Database Trigger Configuration

- Database Trigger Adapter Role Concepts

- Supported Database Systems

- Trigger Configuration

- Supported Database Systems

ERP Cloud Trigger Configuration

- Trigger Request Page Options

- Receive Business Events raised within ERP Cloud

- Receive Callback Event upon Completion of FBDI Bulk Import Job

- Defining Connections

- Receive Request from ERP Cloud Applications

- Trigger Request Page Options

Demo: ERP Cloud Trigger Configuration

- Trigger Request Page Options

Configuring Invoke Connections

- Integration Development Workflow

- Use Cases

- Integration Design Canvas

- Adapter Examples

- Configure Basic Info Page

- Configure Actions Page

- Configure Operations Page

- Adapter Configuration Details

Demo: REST Invoke Configuration

- Use Case #1

- Use Case #2

Database Invoke Configuration

- Database Invoke Adapter Role Concepts
- Supported Database Systems
- Invoke Configuration
- Invoke a Stored Procedure
- Run a SQL Statement
- Perform an Operation On a Table
- Supported Database Systems
- ERP Cloud Invoke Configuration
 - Configure Actions Page Options
 - Query, Create, Update or Delete Information
 - Import Bulk Data into Oracle ERP Cloud
 - Send Files to ERP Cloud

Module 4: Data Transformation

- Map Editor Overview
 - Integration Development Workflow
 - Map Editor
 - Accessing the Map Editor
 - Mapping Canvas
- Using the Map Editor
 - Map Editor
 - Expression Builder
 - Using Set Text Mode & Entering Literal Values
 - Map Editor
- Using the Map Editor
 - Map Editor
 - Node Information
 - Developer Toggle Button
 - Filter Options
 - Search Data Fields
 - Use Element Node Context Menu
 - Troubleshoot Errors
- Working with Functions, Operators, and XSLT Statements
 - Map Editor
 - Working with Functions
 - Working with Operators
 - Working with XSLT Statements
 - Create Conditional Mappings
 - Create for-each Statements
 - Set Default Values in the Mapper

- Work with Multiple Value Statements
- Perform a Deep Copy of Elements with a copy-of Constructor
- Editing XSLT Code
 - Edit XSLT Code in the Map Editor
 - Edit XSLT Code in Oracle JDeveloper
- Creating and Using Lookups
 - Integration Flow
 - Creating Lookups
 - Updating Lookups
 - Using the lookupValueFunction
 - Viewing Lookups In Use
 - OIC Lookup Use Cases
- Variables, Integration Properties, and Schedule Parameters
 - Overview of the Elements
 - Overview of the Elements
 - Global Variables
 - Assigned Variables
 - Scoped Variables
 - Integration Properties
 - Schedule Parameters
 - Summary Comparisons

Application Integration on Oracle Cloud – (Volume II)

Table of Contents

Module 5: Using Integration Actions

- Integration Actions Overview
 - Overview
 - Adding Actions
 - Configuring the Action Logic
 - Actions
 - To wrap up...
- Data Stitch Action
 - Stitch
 - Data Stitch Action Operations
 - Capability Comparisons
 - Assign to a Global Variable
- Demo: Data Stitch Action

- Using the Data Stitch Action in an Integration Orchestration

- Assign to a Global Variable

- Append to a Global Variable

- Using the Data Stitch Action in an Integration Orchestration

- Looping Actions

- Similarities

- While Action Considerations

- Use Cases

- For-Each Action Considerations

- Use Cases

- Differences

- To wrap up...

- Demo: Using the While Action

- Demo: Using the For-Each Action

- Demo: Using the Switch Action

- Demo: Using the Parallel Action

- Demo: Using the OCI Function Action

- Demo: Using the OCI Object Storage Action

- Using the OCI Object Storage Action

- Using the Scope Action

- Scope

- Integration Flow

- Scope Context Considerations

- Nested Scopes

- Wait Action

- Wait

- Integration Flow

- Wait Action Usage

- Demo: Wait Action

- Wait

- Note Action

- Note

- Configuring the Note Action

Module 6: File Processing

- File Handling Fundamentals

- Virtual File System

- Receiving / Retrieving Files

- Writing / Sending Files

- Processing Files

- Structured Versus Opaque Files
- Defining FTP & File Adapter Connections
 - Invoke Role Use Cases
 - Trigger Role Use Cases
 - FTP Adapter
 - Defining Connections
 - Comparing File and FTP Adapters
 - To wrap up...
- Configuring FTP & File Adapter Connection Operations
 - FTP & File Operations
- Configuring FTP & File Adapter Connection Operations
 - FTP & File Operations
- Configuring File Server Action Operations
 - FTP Adapter vs. File Server Action
 - File Server Action Operations
- Demo: File Server Action
- Configuring Stage File Action Operations
 - Processing Files
 - Stage File Action
 - Stage File Action Operations
- Configuring Stage File Action Operations
 - Stage File Action Operations
- Transforming Native File Formats
 - Defining Structured Files
 - File Definition Wizard
 - How to Read/Write Other Native File Formats?
 - Create a Native XML Schema (nXSD) File
 - Using the Native Format Builder Wizard
 - Defining Structured Files

Module 7: Error Handling

- Designing Beyond The Happy Path
 - OIC Error Hospital
 - Designing Beyond the “Happy Path”
- Implementing the Global Fault Handler
 - Default Global Fault Handler
 - Entry to the Global Fault Handler
 - Fault Handling Logic
 - Global Fault Handler End Actions
- Handling Runtime Errors

- Scope Fault Handlers
- Additional Fault Handlers
- Catching Faults
- Implementing Fault Handlers
- Scope Fault Handler End Actions
- Fault Mitigation
- Throw New Fault Action
 - Leveraging the Throw New Fault Action
 - Configuring the Action
 - Optionally, configure the Skip condition
 - Skip Condition Considerations
- Fault Handling Best Practices
 - Handle Faults in Dedicated Fault Handlers
 - Add Logic in the Global Fault Handler
 - Design Error Handling Integrations
 - Establish a Monitoring Strategy
 - Leverage Processes for Manual Intervention
 - Resubmitting Failed Instances
 - Research Extended Strategies
 - Parking Lot Pattern
 - File-based Reprocessing Pattern
 - To wrap up...

Module 8: Additional Integration Topics

- About Packages and Projects
 - Integrations Feature
 - OIC Packages
 - OIC Packages & Projects
 - Key Differences Between Packages & Projects
 - Converting a Package to a Project
- Demo: Working with Projects
- Demo: Viewing Project Dependencies
- Integration Lifecycle Operations
 - Integration Status
 - Activating Integrations
 - Modifying the Tracing Level
 - Untitled
 - Cloning Integrations
 - Integration Versions
 - Handling Locked Integrations

- Demo: Integrations Observability
- Demo: Integration Instance Tracking
- Demo: Publishing an Integration Endpoint to OCI API Gateway
- Demo: Using Events for Decoupling Integrations
- Demo: Using Events in Projects
- Defining Schedules
 - Integration Patterns
 - Schedule Integrations
 - Creating a Schedule
 - Defining a Simple Schedule
 - Defining an Advanced Schedule
 - Starting the Schedule
- Using Schedule Parameters
 - Coordinating Multiple Scheduled Runs
 - Creating Schedule Parameters
 - Using Schedule Parameters
 - Overriding Schedule Parameter Values
- Managing Schedule Integration Runs
 - Initiating an Integration Run Schedule
 - Managing Integration Schedules
 - Initiating an Integration Run Instance
 - View the Status of Submitted Integrations
 - Monitoring Integration Runs
 - Resubmitting Failed Runs
 - Scheduled Integrations REST Endpoints
 - To wrap up...
- Using OIC Prebuilt Solutions
 - What Are Prebuilt Solutions?
 - Finding Solutions: The Integration Store
 - The Breadth of Available Solutions
 - Installing a Prebuilt Solution
 - Configuring Resources
 - Activate & Monitor
 - To wrap up...
- Demo: Using OIC Recipes
- Demo: Using Accelerators
 - Accelerators Extensions and Versions
- Demo: Installing, Extending, Testing, and Exporting an Accelerator
- Demo: B2B Feature Overview
- Demo: B2B XSD & Documents

- Demo: B2B Trading Partner Transports
- Demo: B2B Trading Partner Agreements
- Demo: B2B AS2 Connections
- Demo: B2B REST Protocol Support
- Demo: B2B RossetaNet Protocol Support
- Demo: B2B Resubmit Options
- Demo: B2B Fixed Length Documents

Module 9: OIC Administrator Tasks

- Demo: Provision an OIC Instance
 - Provisioning an OIC 3 Enterprise Edition Instance
- Demo: Assigning OIC Service Roles
- Installing a Connectivity Agent
 - Workflow For Using the Connectivity Agent
 - Create an Agent Group
 - Download the Agent Installer
 - Download the Agent Group Config
 - Prepare to Run the Agent Installer
 - Execute the Agent Installer
 - Post-Installation: Examining the Files
 - Agent Monitoring
 - Restarting the Agent
 - Associating the Connection with the Agent Group
 - Workflow For Using the Connectivity Agent
- Demo: Installing and Managing the Connectivity Agent
 - Requires ServiceAdministrator Role
 - Demo Agenda
- Demo: Configuring an Allowlist to Restrict Access
- Demo: Observability Features
- Demo: OCI Service Metrics & OCI Logging
- Demo: OIC Dashboards in OCI Logging Analytics
- Demo: Fusion Application Monitoring
- Demo: Administering the OIC Embedded File Server
- Demo: Capturing OIC Activity Streams to OCI Logging

Module 10: Integration Solution Examples

- Demo: Business Event Subscription
 - Business Event Subscription: Oracle ERP Cloud to Shopify
- Demo: ChatGPT to Slack Prebuilt Solution
- Demo: Using the Google Cloud Pub/Sub Adapter
- Demo: Using the OCI AI Document Understanding Service

Demo: Using OCI Streaming for Pub/Sub
Demo: Shopify – ERP Cloud Accelerator
Demo: Contract to Procurement – Salesforce, Coupa, DocuSign
Demo: Sync Primavera with PostgreSQL via AWS SQS
Demo: Cohere to Slack Prebuilt Solution
Demo: Oracle ERP Cloud Warehouse Management Inventory Transactions Prebuilt Solution

Module 11: AI Features & Capabilities

AI Features & Capabilities Overview

Keep Progressing:

Augment Integrations with OCI AI Services

What Augmentation Means

Where AI Fits in a Flow

Types of AI Capabilities

What This Enables

The Six OCI AI Actions

Why Use OIC AI Actions

Use Case: Automate Expense Processing

Architectural Advantage

Where You'll Use This

Prerequisites: Before You Build

Best Practice Mindset

To wrap up...

Use the OCI Document Understanding Action

Use the OCI Document Understanding Action – Part 1

Use the OCI Document Understanding Action – Part 2

To wrap up...

Use the OCI Generative AI Action – Part 1

Generative AI Action: Under the Hood

There's a Harder Way to Do This

Three Operations, One Native Action

Where You'll Use This: Two Examples

Rerank + Chat: A Native RAG Pipeline

Use the OCI Generative AI Action – Part 2

Five Steps Through the Wizard

Mapping the Chat Request

Mapping EmbedText & Rerank

Best Practices & Design Patterns

To wrap up...

Use the Generative AI Agents RAG Action – Part 1

- The Problem: LLMs Don't Know Your Data

- The RAG Action: Under the Hood

- The Knowledge Base: Where Your Data Lives

- Agent Endpoints & Sessions

Use the Generative AI Agents RAG Action – Part 2

- Configuring the Action: Four Wizard Steps

- Mapping the Request: Three Mapper Tasks

- What Comes Back: The Response Payload

- Use Cases & Best Practices

- To wrap up...

Use the OCI Language Action – Part 1

- Why OCI Language in OIC?

- Document Understanding: Under the Hood

- 8 Pre-trained Operations

Use the OCI Language Action – Part 2

- 8 Pre-trained Operations

- Configure & Map: Wizard + Key + Text Pattern

- PII / PHI: Detect, Classify, and Mask

- Use Cases & Best Practices

- To wrap up...

Fast Track Automation With AI Assistant

- AI Is Already in the Room

- The AI Assistant Capability Map

- From Plain English to iCal

- Natural Language to ATP & FHIR

- AI-Assisted Troubleshooting

- To wrap up...

Use AI Assistant to Create or Edit Integrations

- From manual to AI-assisted development

- Creating integrations with AI Assistant

- What AI Assistant generates

- Build incrementally with AI

- Editing with AI Assistant

- Example: Enhancing an Integration

- Best Practice: Specify the Target Node

- Best Practice: Name Connections Explicitly

- Prompt Examples: Vague vs. Precise

- AI-assisted vs. manual development

- Completing the Integration

To wrap up...

Use AI Assistant to Create a B2B Trading Partner Setup

What a Manual Trading Partner Setup Requires

Step-by-Step: Trading Partner Setup with AI Assistant

Describe It —AI Assistant Configures It

What AI Creates —and What to Watch For

To wrap up...

Use AI Assistant to Generate Descriptions & Documentation

The Documentation Reality

AI Description & Documentation Capabilities

Project & Integration Descriptions

Integration Description Example

Events, Lookups & Library Descriptions

B2B & Healthcare: Same Mechanism

AI-Generated Project Documentation

Best Practices & Considerations

To wrap up...

Use Integrations as Tools in an MCP Server

What Is MCP? (Model Context Protocol)

OIC as an Enterprise MCP Server

End-to-End Workflow Overview

Step 1: Create Confidential Client Application

Step 2: Register Integration as an Agentic AI Tool

Step 3: Enable MCP for the Project

Step 4: Connect from AI Agent Frameworks

Real-World Use Cases

To wrap up...

Design & Build AI Agents – Part 1

How Integrations & AI Agents Fit Together

From Flows to Agents: A Different Kind of Automation

OIC AI Agent Architecture

Thinking Patterns: How Agents Reason

Your Build Roadmap: 5 Steps to a Running Agent

Design & Build AI Agents – Part 2

Your Build Roadmap: 5 Steps to a Running Agent

Step 1: Plan Agent & Prepare

Step 2: Build the Tool Integration

Step 3: Register as an Agentic AI Tool

Step 4: Configure & Create the AI Agent

Step 5: Run and Test Your Agent

Your Build Roadmap: 5 Steps to a Running Agent

To wrap up...

Add Human Approval to Your AI Agent

The Trust Problem

Three Ways HITL Shows Up

Real-World Use Cases

How It Works in OIC

Before You Build

Workflow, Forms & Tool Recipes

Wiring It to Your Agent

The Reviewer's View

To wrap up...

Demo: Designing Agentic AI with OIC & MCP
