

Oracle AI Database Foundations Associate

Contents

1.1 Oracle AI Database 26ai Converged Value

- Objectives
- How did we get here?
- Data Structures
- Relational Databases
- JSON Databases
- Graph Databases
- Vector Databases
- Oracle's Converged AI Database Strategy
- Simplified Data Access and Management
- Oracle AI Database 26ai: Developing on the Oracle DB
- Oracle supports distributed and decentralized data
- Oracle Database runs everywhere
- Summary

1.2 Using JSON in the Oracle AI Database 26ai

- Objectives
- What is JSON?
- Oracle AI Database 26ai: The Leading Database for JSON
- SQL Meets JSON
- Duality Views
- Defining a JSON Relational Duality View
- Oracle AI Database Is MongoDB Compatible* and More
- Document Collections
- Oracle API for MongoDB
- SQL: Whenever You Need It
- Oracle Autonomous AI Database 26ai
- Summary

1.3 Graph in the Oracle AI Database 26ai

- Objectives
- Graphs in Oracle AI Database 26ai
- What is a graphs?
- Defining a Property Graph View
- Graphs in Oracle AI Database 26ai
- What can you do with graphs?

Analyze Data Based on Connections in Your Data
Data-Driven Apps Create Value Using Graph Analytics
Graph Analytics: 60+ Prebuilt Algorithms
Find Important Vertices
Summary

1.4 Introduction to Oracle AI Vector Search

Objectives
Oracle AI Database 26ai
Vector: What is it?
AI Vector
Example: Vector for a Support Incident
Example: Vector for an Image of a Park
AI Vector Search
Vector Distance
Vector Similarity Search
Vector Data Type
Generate Vectors
AI Vector Search in Oracle AI Database 26ai
Vector Index
Neighbor Partition Vector Index – Search
Graph Vector Index
Vector Index Creation
Approximate Vector Indexes
Vector Index Creation – TARGET ACCURACY
AI Vector Search | Transactions
AI Vector Search | Scale-Out with Real Application Clusters
AI Vector Search | Scale-Out with Exadata Smart Storage
AI Vector Search | Scale-Out with Partitioning
AI Vector Search | Scale-Out with Sharding
AI Vector Search: Fully Integrated with DB Options
AI Vector Search Highlights
Summary

2.1 Introduction to Autonomous AI Database

Objectives
Autonomous AI Database
Autonomous AI Lakehouse
One Autonomous AI Database Two Deployment Choices

Autonomous AI Database Serverless Versus Dedicated Summary

2.2 Create an Autonomous AI Database

Objectives

Autonomous AI Database

Creating an Autonomous AI Database

Summary

3.1 Oracle Autonomous AI Database Tools: Overview

Objective

Oracle Autonomous AI Database

Database Actions

Autonomous as a Development Environment

SQL Developer

APEX

REST

JSON

SQLcl

Database Actions

Machine Learning Notebooks

Database Actions

Graph Studio

Data Studio

Overview of Data Studio Tools

Summary

3.2 Oracle Autonomous AI Database, Data Studio

Objectives

Data Studio

Enabling Data Studio

Catalog: Search and Discover Data

Catalog: Understand Data

Catalog: Trace Data Lineage and Impact

Data Load: Easy-to-Use

Table AI Assist: Guided Data Preparation

Data Transforms: Comprehensive E-L-T

Jobs: Operationalize Data Load and Preparation

Insights: Automate the Discovery of Data Insights

Analysis: Model, Query, and Analyze Data

Analysis: Spreadsheet Add-Ins

Share: Govern Access to Shared Data
Marketplace
Summary

4.1 Introduction to AI

Objectives
What is Artificial Intelligence?
Human Intelligence
AI Examples
AI Terminology
Why do we need AI?
AI Domains and Examples
Summary

4.2 Select AI

Agenda
Oracle can bring AI to the enterprise at every layer of our stack.
Autonomous AI Database Select AI
Select AI
Select AI Translates Your Language into Oracle SQL Language
Developing Apps with Select AI
Easy to Configure Your Data for Natural Language Queries
SQL Query Generation Process Flow
Autonomous AI Database Select AI
Summary

4.3 Using AI Vector Search in Autonomous AI Database 26ai

Objectives
Oracle AI Vector Search
Database-Native Vector Embedding Generation
Vector Datatype
Vector Distance Function
Vector Search SQL
Vector Index Syntax
Vector Search
Similarity Search Over Joins
AI Vector Search Powers Gen AI Pipelines
Oracle AI Vector Search with Oracle AI Database 26ai
Summary

4.3 Machine Learning Foundations

- What is Machine Learning?
- Machine Learning Example
- ML Applications
- ML Model: Inputs and Outputs
- ML Model to Classify Cats and Dogs
- Data Types
- Flavors of Machine Learning
- ML Examples
- When is ML NOT the optimal solution?

5.1 Oracle APEX

- What is low code?
- Low-Code Development Platform
- What is low code?
- Gartner
- Why Use Low Code
- Enter Oracle APEX
- Oracle APEX
- The Oracle APEX Advantage
- Native Low-code Platform of Oracle Database
- APEX Approach
- What does APEX do for you?
- What does APEX do for you?
- AI Features
- Forrester
- Low Code = APEX
- 38x Faster Development Time
- Real-World Use Case
- Problem Statement
- Goals
- Timeline
- Results
- Oracle APEX
- oracleapex.com
