

Introduction to Monitoring with Paessler PRTG

This training is designed for IT professionals looking to get started with network monitoring using Paessler PRTG. You'll gain a solid foundation in installing PRTG, adding devices to monitor, and visualizing sensor data - all through hands-on labs that let you practice as you learn.

Target Audience

Helpdesk, IT
Administrators

Training Material

Theory and interactive
hands-on labs

Training Duration

1 day (8 hours)

Included

Exam voucher for
Certified Paessler
Monitoring Professional

Agenda

01

Module 01:

Introduction to Paessler PRTG

- Overview of network monitoring fundamentals
- Understanding target devices and supported protocols
- PRTG architecture and deployment scenarios
- Common use cases

02

Module 02:

Installing PRTG Network Monitor

- Monitoring preparation
- Installing PRTG on a clean Windows Server machine
- User interfaces overview
- Understanding auto-discovery and device templates
- Navigating the device tree and working with probes, groups, devices, and sensors

03

Module 03:

Sensors Overview

- Overview of sensor types and capabilities
- Sensor limits and lookups
- Configuring and managing WMI and SNMP sensors
- Understanding sensor dependencies

Agenda

04

Module 04: Notifications

- Setting up notifications and alerts
- Understanding notification templates and triggers

05

Module 05: Data Visualization

- Working with libraries
- Creating and managing reports
- Designing interactive dashboards (maps)

06

Module 06: Extensions

- Overview of available PRTG extensions
- Exploring use cases and how to extend PRTG's functionality
