

IBM Business Automation Workflow (BAW) 25: Advanced Process Design and Integration

OEM: IBM • Duration: 1 Day (8 hrs) • Code: V010036G

COURSE MODULES & TOPICS

Objectives

- Design advanced workflow patterns for complex business scenarios
- Implement process cancellation patterns
- Integrate workflow applications with external systems and web services
- Configure and consume REST and SOAP services within BAW
- Handle content and document-related events within business processes
- Develop event-driven process applications
- Apply best practices for workflow integration and process orchestration
- Build robust and scalable workflow solutions using BAW 25.0.1

Introduction to IBM Business Automation Workflow 25.0.1

- Course objectives and learning path
- Overview of BAW architecture
- Process applications and toolkits
- Review of development lifecycle
- Introduction to the hands-on lab environment
- Overview of exercises and use cases

Unit 1: Managing Complex Tasks and Process Interactions

- Exercise: Building a cancellation pattern

Unit 2: Integrating with External Systems

- Exercise: Building web service connections

Unit 3: Handling Content Events in a Process

- Exercise: Handling content events in a process
- Content event management
- Event-driven workflow development
- Process-content integration

- Workflow automation techniques
