

Awareness on Straight Through Processing (STP)

Course Table of Contents (TOC)

Detailed Table of Contents

Module 1: Introduction to Straight Through Processing

- What is STP?
- Purpose and importance of STP
- Manual Processing vs STP
- STP in Banking and Financial Services
- Typical STP architecture

Module 2: End-to-End Transaction Lifecycle

- Transaction initiation
- Data validation
- Authorization
- Processing and routing
- Clearing and settlement
- Confirmation and reconciliation

Module 3: STP in Payments

- Domestic payment processing
- International / cross-border payments
- Fund transfer workflow
- Payment gateways and banking systems
- Role of correspondent banks
- Payment status and confirmations

Module 4: Financial Messaging and SWIFT

- Introduction to SWIFT
- Financial messaging concepts
- Role of standardized messages
- Message validation
- SWIFT MT message awareness
- Migration toward ISO 20022

Module 5: ISO 20022 and Structured Data

- Introduction to ISO 20022
- XML-based financial messages
- Rich and structured payment data
- ISO 20022 payment flow
- Benefits for STP
- Data-quality requirements

Module 6: Validation and Compliance

- Customer and account validation
- KYC and AML awareness
- Sanctions screening
- Fraud detection
- Transaction limits
- Compliance checks within STP

Module 7: Exception Handling

- What is an STP exception?
- Reasons transactions fail STP
- Missing or incorrect information
- Rejected and returned payments
- Exception / repair queues
- Manual intervention and reprocessing

Module 8: Clearing and Settlement

- Clearing concepts
- Settlement concepts
- Gross vs net settlement
- Payment clearing systems
- Settlement confirmation
- Finality of payment

Module 9: Reconciliation

- What is reconciliation?
- Transaction matching
- Bank reconciliation
- Automatic vs manual reconciliation
- Unmatched transactions
- Break and exception resolution

Module 10: STP Monitoring and KPIs

- STP rate
- Exception rate
- Rejection rate
- Transaction processing time
- Failure rate
- SLA monitoring
- Operational dashboards

Module 11: STP Technology and Integration

- Core banking systems
- Payment processing applications
- APIs
- Middleware

- Message queues
- Front-office and back-office integration
- Automation and workflow engines

Module 12: Security and Risk Management

- Authentication and authorization
- Data security
- Transaction security
- Operational risk
- Cybersecurity considerations
- Audit trails and logging

Module 13: Benefits and Challenges of STP

- Faster processing
- Reduced manual effort
- Lower operational cost
- Reduction in human errors
- Better customer experience
- Scalability
- Implementation challenges

Module 14: STP Improvement and Optimization

- Improving data quality
- Reducing manual touchpoints
- Standardizing processes
- Improving system integration
- Automation opportunities
- Root-cause analysis of exceptions
- Improving STP percentage

Module 15: Case Studies and Practical Scenarios

- Domestic fund-transfer example
- India-to-UK cross-border payment
- Successful STP transaction
- Transaction requiring manual repair
- Failed / rejected transaction
- End-to-end payment lifecycle exercise

Module 16: Future of STP

- AI and intelligent automation
- Robotic Process Automation (RPA)
- Real-time payments
- API-based banking
- ISO 20022 adoption
- Intelligent exception management
