

DS-1009: Build context-aware agents that drive real business decisions

Session description:

Build AI agents that deliver more accurate insights and lead to more trusted business outcomes. Learn how Microsoft IQ creates a unified intelligence layer that connects business context, organizational knowledge, and your data so agents can reason more effectively and scale across your organization.

See how Foundry IQ and Fabric IQ help connect agents to business knowledge and data to drive more relevant decisions and consistent results.

This free, 60-minute, expert-led session includes practical demonstrations and a live Q&A with Microsoft experts.

In this session, you'll learn how to:

- Ground AI agents in trusted business data with Microsoft IQ.
- Improve agent accuracy with shared business context across data, workflows, and knowledge.
- Connect agents to the knowledge and data that power your business using Foundry IQ and Fabric IQ.
- Scale from agent prototypes to production-ready intelligent systems.

Who should attend: Data and AI leaders, enterprise architects, data platform professionals, AI developers, and security professionals.

Technical Level: Intermediate (200), for attendees familiar with the topic who want practical demonstrations and expert guidance.
