

DS-1001: Rethinking Business Processes for the AI Era

Session description:

Rethink how work gets done in the AI era. Learn how AI-powered business applications help teams move from insight to action faster by connecting data, processes, and workflows across the organization.

Discover how agents can help streamline operations, reduce manual effort, and support employees with intelligent assistance while keeping people in control of business decisions.

This free, 60-minute, expert-led session includes practical demonstrations and a live Q&A with Microsoft experts.

In this session, you'll learn how to:

- Modernize business processes with AI-powered automation and agents.
- Connect data, workflows, and applications into a unified flow of work.
- Enable faster decision-making with connected business context.
- Drive productivity, efficiency, and business outcomes at scale.

Who should attend: Business and operations leaders, CIOs, enterprise architects, business applications professionals, and AI transformation teams.

Technical Level: Intermediate (200), for attendees familiar with the topic who want practical demonstrations and expert guidance.
