C_DBADM – SAP HANA Database Administrator

Detailed Table of Contents

Module 1: Introduction to SAP HANA

1.1 Overview of SAP HANA
1.2 In-Memory Computing Concepts
1.3 SAP HANA Editions and Deployment Options
1.4 SAP HANA Cloud vs On-Premise
1.5 SAP Business Technology Platform (BTP) Overview
1.6 SAP HANA Use Cases

Module 2: SAP HANA Architecture

2.1 SAP HANA Architecture Overview
2.2 Index Server Components
2.3 Name Server
2.4 Statistics Server
2.5 XS Engine
2.6 Persistence Layer
2.7 Data Volumes and Log Volumes
2.8 Multi-Tenant Database Containers (MDC)
2.9 System Databases and Tenant Databases

Module 3: SAP HANA Installation and Provisioning

3.1 Installation Planning
3.2 Hardware and Software Requirements
3.3 SAP HANA Lifecycle Management Tools
3.4 Single Host Installation
3.5 Distributed System Installation
3.6 SAP HANA Cloud Provisioning
3.7 Post-Installation Activities
3.8 System Verification

Module 4: Database Administration

4.1 SAP HANA Cockpit
4.2 SAP HANA Database Explorer
4.3 SAP HANA Studio Administration
4.4 Start and Stop Procedures
4.5 Configuration Management
4.6 Managing Services and Processes
4.7 System Landscape Management
4.8 Trace and Log Files

Module 5: User Administration

5.1 Authentication Concepts
5.2 User Types
5.3 Creating Users
5.4 Role Management
5.5 Privileges and Permissions
5.6 User Groups
5.7 Password Policies
5.8 Identity Management Integration

Module 6: Database Security

6.1 SAP HANA Security Architecture
6.2 Authorization Concepts
6.3 SQL Privileges
6.4 Analytic Privileges
6.5 Encryption Mechanisms
6.6 Data Volume Encryption
6.7 Log Volume Encryption
6.8 Secure Communication (SSL/TLS)
6.9 Auditing and Compliance

Module 7: Monitoring SAP HANA

7.1 Monitoring Architecture
7.2 SAP HANA Cockpit Monitoring Tools
7.3 System Health Monitoring
7.4 Monitoring Memory Utilization
7.5 Monitoring CPU Usage
7.6 Monitoring Disk Usage
7.7 Monitoring Database Performance
7.8 Alerts and Notifications

Module 8: SAP HANA Performance Optimization

8.1 Performance Fundamentals
8.2 Memory Management
8.3 Workload Management
8.4 Query Performance Analysis
8.5 SQL Optimization Techniques
8.6 Table Partitioning
8.7 Resource Management
8.8 Performance Troubleshooting

Module 9: Backup and Recovery

9.1 Backup Concepts
9.2 Data Backups
9.3 Log Backups
9.4 Storage Snapshot Backups
9.5 Recovery Strategies
9.6 Point-in-Time Recovery
9.7 Tenant Database Recovery
9.8 Recovery Scenarios
9.9 Backup Catalog Management

Module 10: High Availability and Disaster Recovery

10.1 High Availability Concepts
10.2 SAP HANA System Replication
10.3 Replication Modes

10.4 Failover Concepts
10.5 Disaster Recovery Planning
10.6 Cluster Configuration
10.7 Business Continuity

Module 11: Troubleshooting and Diagnostics

11.1 Troubleshooting Methodology
11.2 Diagnostic Tools
11.3 Trace Analysis
11.4 Log Analysis
11.5 Performance Diagnostics
11.6 Problem Resolution Techniques
11.7 SAP Support Procedures

Module 12: SAP HANA Cloud Administration

12.1 SAP HANA Cloud Architecture
12.2 Provisioning SAP HANA Cloud Databases
12.3 Cloud Administration Tools
12.4 Monitoring Cloud Databases
12.5 Security in SAP HANA Cloud
12.6 Backup and Recovery in Cloud

Module 13: Migration to SAP HANA Cloud

13.1 Migration Overview
13.2 Migration Tools
13.3 Migration Assessment
13.4 Data Migration Methods
13.5 Validation and Testing
13.6 Post-Migration Activities
