Creo Parametric 13.4

Delivery method

Instructor-led

Guidebook languages

English

Deutsch

Course overview

This course builds on foundational MBD skills by teaching users how to refine, organize, validate, and publish annotated 3D product definitions. Learners develop the skills needed to manage and modify annotation elements, complete combination states, establish semantic relationships between annotations and model geometry, and prepare models for downstream consumption. The course emphasizes creating high-quality model-based definition (MBD) datasets that support manufacturing, inspection, and enterprise-wide data reuse, culminating in the creation and publication of Technical Data Packages (TDPs) and lightweight deliverables such as Creo View and 3D PDF files.

Prerequisites

Creo: Creating Annotations Using Model-Based Definition

Audience

Design Engineer

Learning objectives

Modify annotation elements

Complete combination states

Publish a Technical Data Package
