COURSE TABLE OF CONTENTS

Performance Testing with JMeter and Gatling

OEM: Koenig Original • Duration: 8 Days (64 hrs)

COURSE MODULES & TOPICS

Module 1: Course Introduction
- Trainer and participant introductions
- Overview of course agenda

Module 2: Pre-Assessment
- Pre-test with 15 questions

Module 3: Performance Testing Fundamentals
- Overview and importance of performance testing
- Performance testing process and objectives
- Baseline vs benchmarking testing
- Performance tuning concepts
- Types of metrics and graphs
- Key terminology: VUsers, response time, throughput, bottleneck

Module 4: Defining Performance and Business Goals
- Identifying performance goals
- Validating test project need and feasibility
- Exercise: Understanding goals

Module 5: Infrastructure and Architecture Considerations
- Target platforms and systems
- Designing the test workload
- Transactions and load definition
- Types of performance tests
- Refining measurements: response times, resource usage

Module 6: Introduction to JMeter
- What is JMeter
- When and why to use JMeter
- Getting started quiz

Module 7: JMeter Setup and Interface
- Prerequisites for JMeter
- Installing and setting up JMeter
- JMeter GUI and features overview

Module 8: Creating Test Plans in JMeter
- How to create tests in JMeter
- Overview of samplers
- Test creation modes
- Examples: Web and API performance testing

Module 9: Thread Groups in JMeter
- Thread Group configuration
- TearDown and Ultimate Thread Group

Module 10: JMeter Samplers
- HTTP/HTTPS Sampler
- JDBC and OS Process Samplers
- JSR223 Sampler
- CRUD operations and logical conditions

Module 11: Logic Controllers
- Purpose of logic controllers
- Types: Module, Throughput, Logical, Transaction Controllers
- Hands-on exercises

Module 12: Processors in JMeter
- Pre-Processors and Post-Processors
- JSON Extractor
- Bean Shell, Regular Expression, XPath Extractors
- Hands-on examples

Module 13: Listeners and Reporting
- Types of listeners
- Creating HTML dashboard reports
- Dashboard creation using CLI
- Usage in production

Module 14: Config Elements
- Purpose and types of config elements
- User Defined Variables
- CSV Data Set Config
- HTTP Header Manager
- JDBC Connection Configuration

Module 15: Using Templates in JMeter
- What are templates
- How to use JMeter templates
- Sample project creation

Module 16: Assertions in JMeter
- Types of assertions
- Response text and code assertions
- JSON, duration, size, Bean Shell assertions
- Assertions for web and API testing

Module 17: Test Execution Methods
- Running tests in GUI and command-line
- Executing longevity, spike, and stress tests

Module 18: JMeter Plugins

- What are plugins
- Commonly used plugins
- Using the Plugin Manager

Module 19: Web Application Testing with JMeter

- Setting up web application tests
- End-to-end test creation and execution
- Documentation and analysis

Module 20: Web Services API Testing with JMeter

- Setting up API tests
- End-to-end test creation and execution
- Documentation and analysis
